Loc: Nanjing

Age: 20

<<< Education & Research Interests

2023-now

JNU/Dept. of Mathematics

Major: Information and Computing Science

GPA: 4.3/5 (rank 5%)

Overall Rank: 2/40

Eng. level: CET-6 (570)

Core course: Analysis I/II/III (90/94/100), Algebra I/II (98/97), Probability and Statistics (97), ODE (99), Database (97), Intelligent Computing (97), Operational research (100), Data Structure (100)

Research Interests: The application of computational mathematics in machine learning and AI algorithms; deep learning; reinforcement learning; LLMs

<<< Learning Experience

2025-2026

Semantic Communication and AI Security Recognition System Design

Member

[Backgrounds] Addressing the issues of poor transmission performance, low transmission rate, and security concerns in the image transmission process of drone low-altitude logistics, a collaborative optimization strategy is constructed, incorporating multimodal data semantic information extraction (UT+CNN), edge computing (Ascend AI), and secure encoding (DeepJSCEC).
[Role] As a core member of the team, I was responsible for developing the front-end interface for drone control and designing the user command input module, which has obtained a software copyright registration certificate. I also participated in the design of the system's coding module, handling AI framework and model invocation. I was responsible for drawing charts and diagrams, as well as proofreading and formatting the entire documents. This project has been approved at the national level.

2025.11

2025 15th APMCM

Data Analysis

[Role] Independently responsible for data collection, cleaning, and preprocessing, providing a high-quality foundation for subsequent modeling; based on the Dirichlet regression, multivariate Logit, time series, and other models constructed by team members, conducted in-depth analysis and interpretation of the quantitative impact of US tariff policies on global trade, proposed directions for model improvement, such as introducing Bayes hierarchical structure and time-varying elasticity function to enhance prediction accuracy and robustness; independently wrote English papers, ultimately completing 1 paper.
[Prize] Second prize, Undergraduate group

2024.11

“大湾区杯” Financial Mathematical Modeling Competition

Team Leader

[Role] Under the poor results of multiple linear regression, I led the construction of a systematic risk prediction system based on logistic regression and NAR neural network, achieving effective backtesting of historical data with prediction errors controlled within 2.5%. During the modeling process, I introduced deep learning algorithms to optimize traditional models, enhancing their robustness and prediction accuracy in complex market environments. I independently completed 1 paper.
[Prize] Third prize, Undergraduate group

<<< Honors

(1) National Scholarship (2024-2025)

(2) Outstanding Young Volunteer of JNU (2024-2025)

(3) Second-class scholarship for outstanding students of JNU (2023-2024)

(4) Outstanding staff member of the college student union (2023-2024)

<<< Self-assessment & Skills

· C/C++, MATLAB, Python, and related libraries, PyTorch, LLMs

· Familiar with the general process of project work, with team practical experience ranging from problem comprehension, data cleaning, model construction and optimization to result analysis

> As a student pursuing interdisciplinary development, I embrace a lifelong learning mindset and am willing to embrace new content and knowledge.
